

New Scientist Live 2025

Never see moss in the same way again!

Did you know an entire safari adventure is waiting in a moss cushion? Under the microscope, moss is a forest packed with tiny animals. They're smaller than a speck of dust — but full of surprises! Each has its own amazing story of survival while living in moss.

Meet the microscopic Big Five

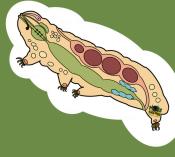

mites

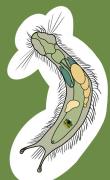

nematodes

rotifers

tardigrades

gastrotrichs

Why Visit Our Stand?

🔬 See a live tardigrade! Meet the famously tough “water bear.”

🎁 Get a FREE exclusive Moss Safari sticker! Just whisper the secret password! See the speech bubble (subject to availability).

🛍 Explore Moss Safari merch! Stickers, badges and the Moss Safari book!

👪 Family fun for everyone! Explore together and try your own mini-safari.
